- Storage Solutions
- Data Center Solutions
- Digital Media Systems
- Digital Signage

The Shell Edge

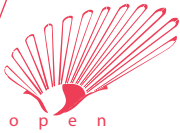

At Shell Networks, we pride ourselves on a systematic and structured approach towards the design of every solution, based on the customer's needs. Shell Networks has been consistently investing in Learning and Certifications. The teams have expertise in a wide range of technologies and experience in working with customers from several fields of industry thus giving us

- Proven expertise in understanding the challenges of a Growing Organization.
- Relentless process orientation in delivering business relevant solutions, and
- Sound track record with an emphasis on value creation

These help us not only to meet our customer requirements, but also helps us in anticipating the customers future needs and prepares them for the next step thereby protecting Customers investments.

As business grows rapidly, having a robust, flexible, and scalable IT infrastructure is imperative. Technological developments and multiple choices have made IT-related decisions simply 'complex'. Today, building a reliable, scalable and cost-effective IT infrastructure involves the integration of multi-vendor solutions, products and technologies. Our approach to building a solution involves assessment of the current infrastructure, understanding the customer's unique requirements, designing an optimal solution and finally deploying it. Our focus is on 'solutions integration' rather than 'systems integration'.

Our reputation for honest, no-nonsense business is based on our core values personal and corporate integrity, total customer satisfaction and top-quality products and solutions, and our adherence to quality. Our ability to consistently deliver world-class solutions have resulted in several long-standing and highly productive relationships with our customers, who have returned to Shell in order to meet their needs, whether they are expanding, upgrading or going for new installations.
